

# Second Brain for Claude

*Why it forgets your company, and how to fix  
it in a folder*

**Florian Steiner**

Claude Community Ambassador Munich

Monday, 21 September 2026 · 11:00 to 12:00 · Auditorium

## WHO IS TALKING

# Florian Steiner

Claude Community Ambassador in Munich. I build with Claude Code for small and mid-sized companies, and I teach it.

- Claude Certified Architect: Professional, plus Architect Foundations and Associate
- Two more sessions this week: Claude Code for SME owners and CEOs, and the certification programme
- **Everything here is in one public repository:** these slides, the four skills, the example wiki, the demo script, and prepared results in case the demo breaks

[github.com/ProduktEntdecker/enterprise-memory-starter](https://github.com/ProduktEntdecker/enterprise-memory-starter)

Scan now, follow along

# My own agent did not know my date of birth.

It is one line in `identity.md`, in the folder I keep about myself. The agent had never been told that folder exists.

## 1 · THE MAP PROBLEM

# Not a memory problem. A map problem.

Context is finite

Every token spends attention.

Loading everything is not an option.

So give the agent a map

Know where to look.

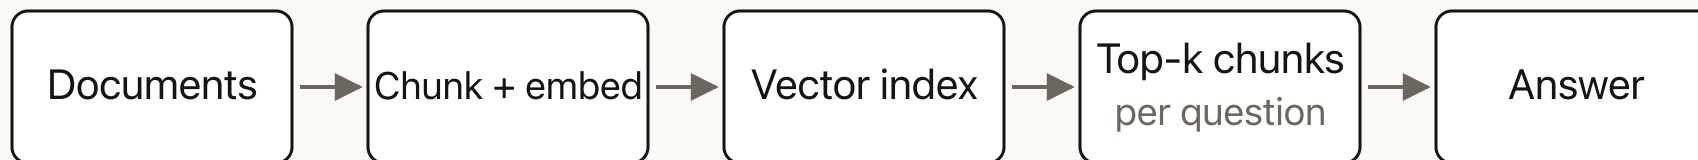

Then load only what the question needs.

## 2 · THE LLM WIKI PATTERN

# Retrieve every time, or compile once

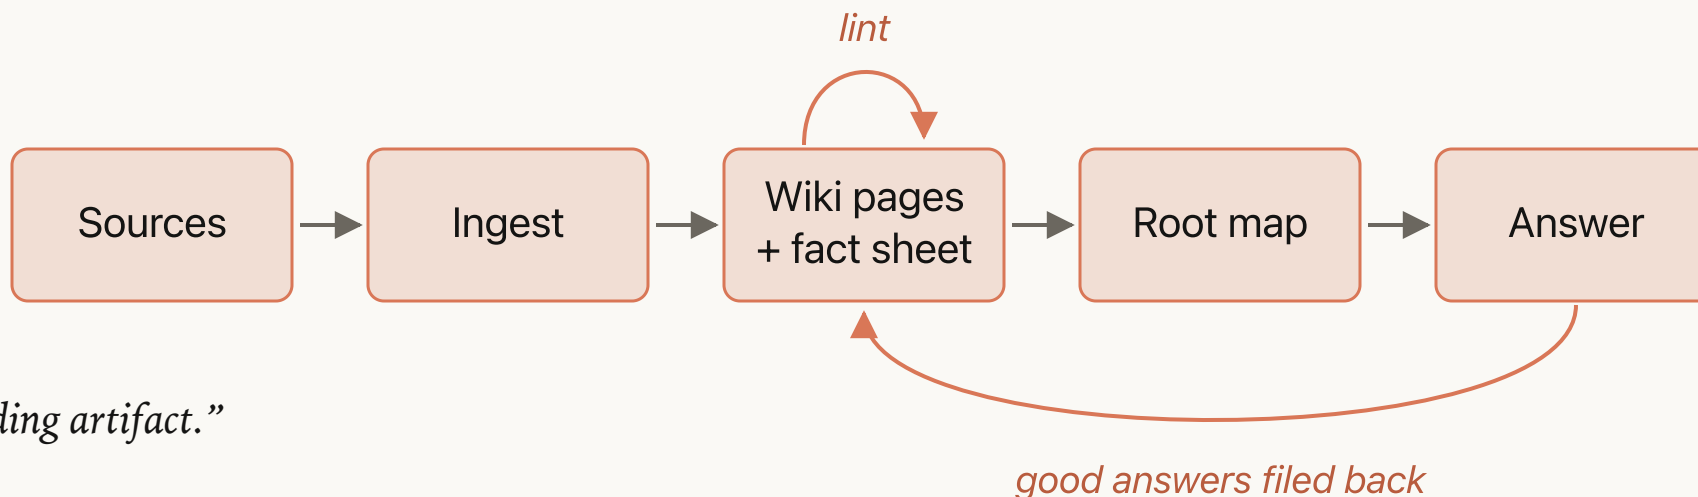

### Retrieval (RAG)

work at question time  
chunks, embeddings

### LLM wiki

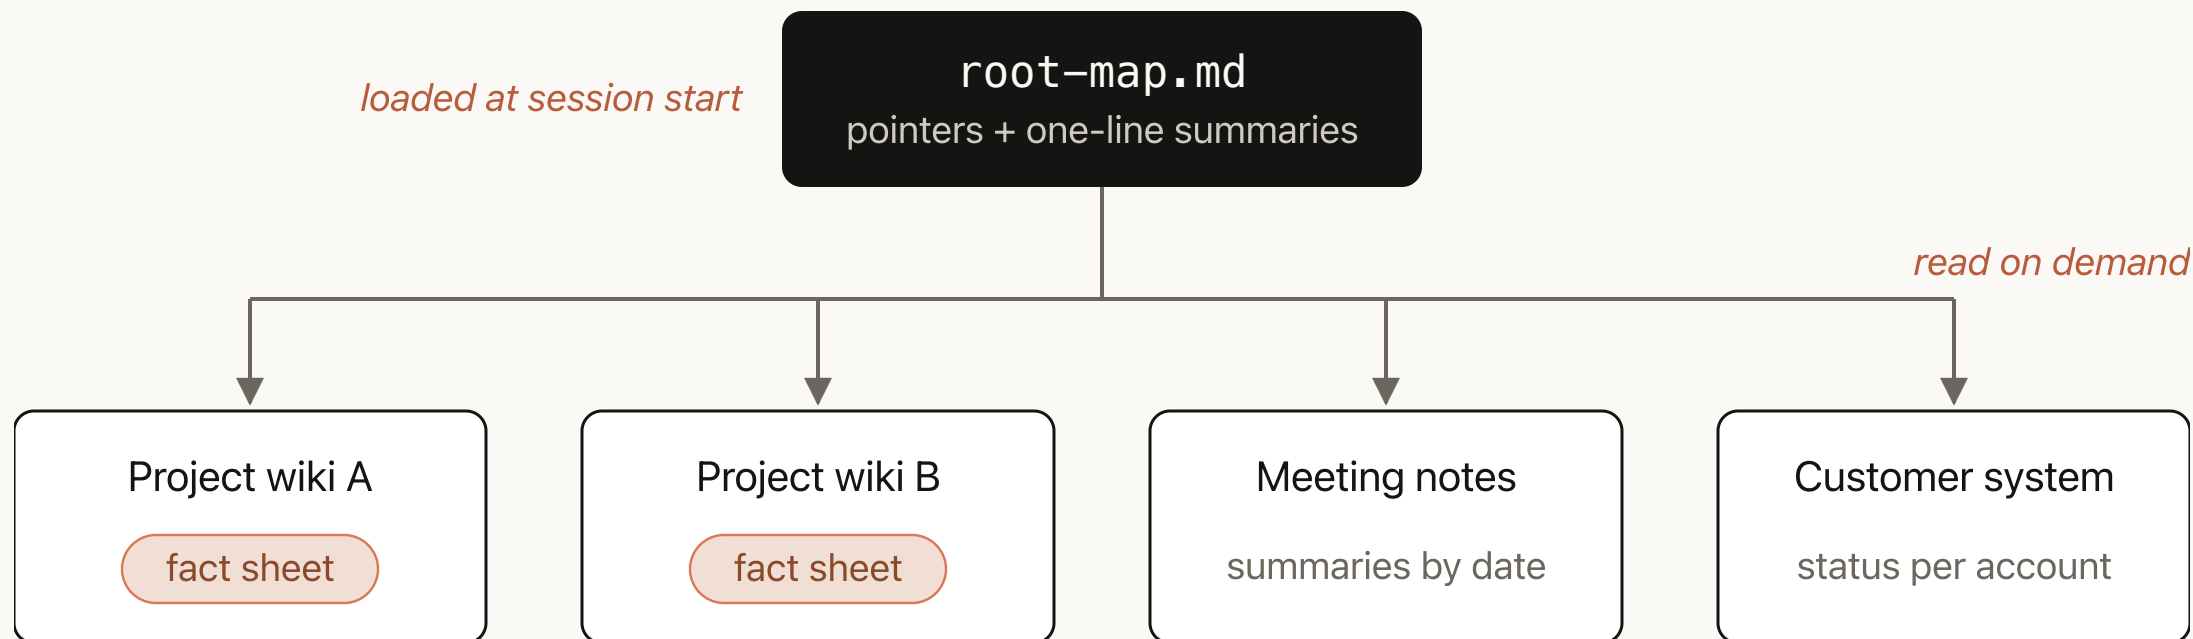

work at ingest time  
files you can read

*“A persistent, compounding artifact.”*

Karpathy, on the wiki

# Root map: one small file, always loaded

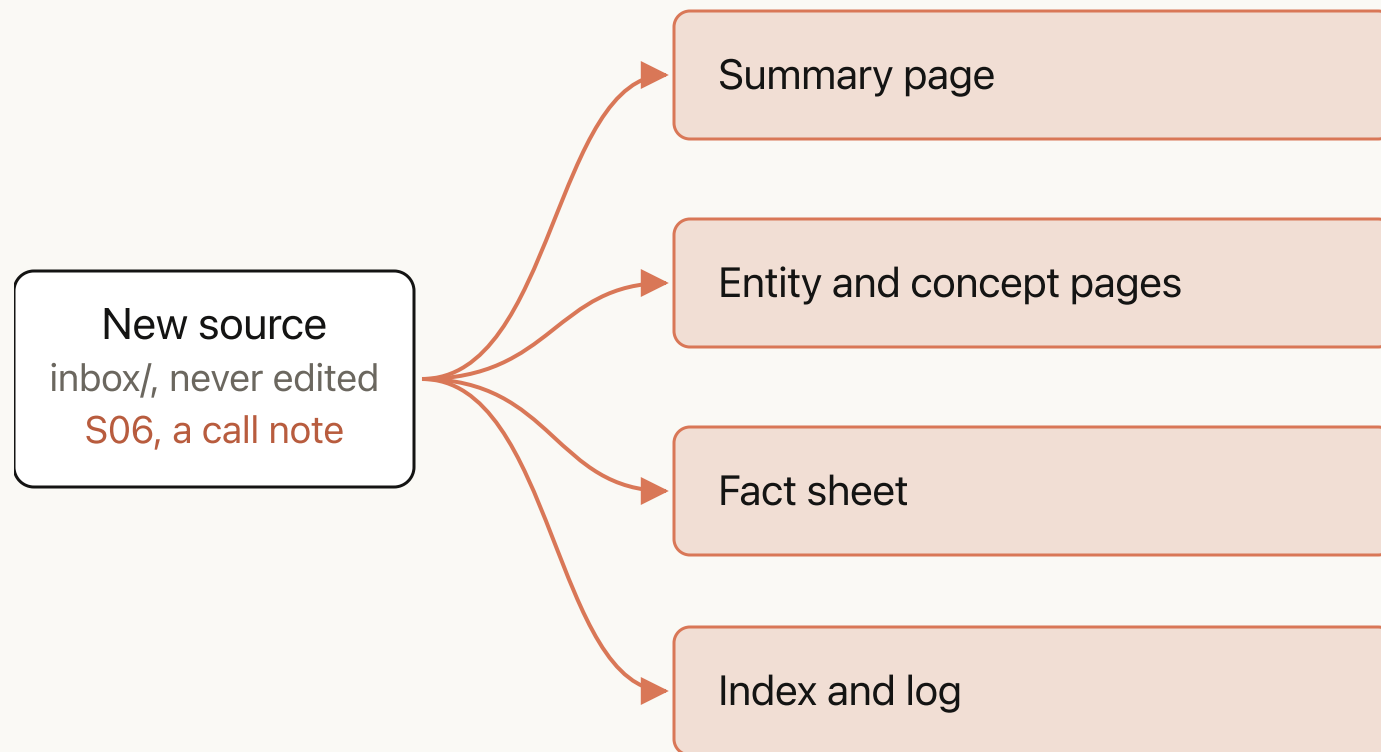

The agent reads the map first, then descends only where the question leads.

# Canonical fact sheet: one home per fact

| FACTS.md         |                             | this event, my own wiki |                       |
|------------------|-----------------------------|-------------------------|-----------------------|
| FACT             | VALUE                       | SOURCE                  | AS OF                 |
| Venue            | Carrer de Bilbao 128        | luma + venue team       | 2026-09-13            |
| Room 4 capacity  | 25 seats                    | backoffice, read myself | 2026-09-19            |
| Ticket cap       | room capacity + 20%         | house organisers        | 2026-09-13            |
| <del>Venue</del> | <del>Two Parc Central</del> | earlier planning chat   | <del>2026-08-08</del> |

Other pages link here instead of copying. This is why I can still tell you the right room number.

# Ingest: read once, update many pages

10 to 15

wiki pages a single source might touch.

Karpathy's own research wiki: about 100 articles and 400K words, navigated through index files and summaries.

S06 is still sitting in the inbox. We run it live in a moment.

# Lint: a health check for the wiki

---

☒ Contradictions between pages

---

☒ Stale claims a newer source superseded

---

☒ Duplicates: one thing, two pages

---

OWN ADDITION

☒ Orphans: pages nothing links to

---

OWN OBSERVATION

Skip lint, and a wrong fact gets  
filed back, then cited again.

# Karpathy described it. We turned it into four commands.

---

## **/wiki-init**

A folder of documents becomes a wiki. Ingests every source oldest first, builds the fact sheet from the claims it finds, registers the wiki in the root map. Runs once per project.

---

## **/wiki-lint**

The health check. Finds contradictions, duplicates, stale facts, orphans. Writes a dated report and changes nothing until you name a finding.

Four markdown files in `.claude/skills/`. Clone the repo, and they are in your slash menu. **No install, no service, no key.**

---

## **/wiki-ingest**

One source in, many pages out. Writes the summary, updates entities, proposes fact sheet changes and waits. The original is never edited, only moved.

---

## **/wiki-query**

Answers from the wiki, not from memory, and shows the path it took. Offers to file a good answer back as a new page.

# The lint reports. It does not repair.

## **Never silently fix**

The report comes first. A finding is resolved when a human names its number, and the resolution is logged.

## **Newest is not automatically right**

A newer source wins only if it owns the fact or says explicitly that it replaces the old one. Never resolve a contradiction by date alone.

## **Report only what you verified**

A script proposes candidates. Every one is checked by reading the pages before it reaches the report.

## **Every finding has an owner**

The fact sheet names the role that decides. A finding without an owner is itself a finding.

Two parts: `.claude/skills/wiki-lint/SKILL.md` is the procedure, `scripts/check_links.py` does the mechanical pass. Both in the repo.

0 Init

1 Ingest

2 Lint

3 Fact sheet

0

# A folder of documents becomes a wiki

Three public documents about **this event**: the programme, the room list, the rules for hosts. No wiki yet. One command.

`/wiki-init examples/claude-house` Expect nine to twelve pages and a fact sheet with about a dozen rows.

0 Init

1 Ingest

2 Lint

3 Fact sheet

# 1

## Ingest a new source

A new document for **Sotarena S.L.** lands in `sources/inbox/`. Watch which wiki pages change.

0 Init

1 Ingest

2 Lint

3 Fact sheet

# 2

## Lint finds a contradiction, a duplicate and a stale fact

Contradiction

Two values for one fact

Duplicate

One entity, two pages

Stale fact

Superseded by a newer source

3

The fact sheet shows the winning value, with its source

| sotarena / FACTS.md |               |              | after lint             |
|---------------------|---------------|--------------|------------------------|
| FACT                | WINNING VALUE | SOURCE       | REPLACES               |
| [fact]              | [value]       | [file, date] | <del>[old value]</del> |

#### 4 · WHEN TO USE WHICH

# Compile what matters. Retrieve the rest.

Root map

always loaded

LLM wiki

curated, recurring, canonical

Promote recurring answers into the wiki

Fall back to retrieval when no page exists

Retrieval over raw sources

large, unforeseen, fresh

Under about 200K tokens? Load it all. No retrieval needed.

BEFORE YOU GO

# \$50 in API credits, first come, first served

1. Scan the code and open the offer page
2. Copy your **Organization ID** from `platform.claude.com`
3. Submit it. Credits land within a few minutes

Submit the **Organization ID**, not your Claude.ai account ID. A wrong submission cannot be corrected afterwards.

API only · not Claude.ai · one claim per person · 34 available

TAKE IT WITH YOU

# Clone it, run the same four steps

**The starter repo**

`github.com/ProduktEntdecker/  
enterprise-memory-starter`

**What I do**

`produktentdecker.com`

**Say hello**

`linkedin.com/in/  
floriansteiner`

Questions? 11:52 to 12:00

BACKUP · ONLY IF THE QUESTION COMES UP

## Why not just retrieval?

Strong where this pattern is weak: huge corpora, unknown questions, a file indexed in seconds. Three things it gets wrong:

---

Chunk boundaries

"Revenue grew by 3%." Which company? Which quarter?

---

No canonical fact

Last year's price list ranks as high as this year's.

---

Contradictions

Both versions reach the prompt. The model picks one.

---

And on my side

No chunking to tune, files I can read, Obsidian as the UI, running in an afternoon.

---

**Sources:** Anthropic, Contextual Retrieval (2024); Lewis et al., RAG, NeurIPS 2020; Sarthi et al., RAPTOR (2024); Wang et al., RAG with Conflicting Evidence, COLM 2025. **Own observation:** the canonical-fact row.

## Fallback: A folder becomes a wiki

Wiki created: `examples/claude-house/wiki`

Pages: 3 summaries, 4 entities

FACTS.md: 12 rows, **2 marked "needs decision"**, 3 without an owner

Supersessions recorded: 2 (both declared by the source itself)

Room 4 capacity      20 → 25 seats      (backoffice, 19 Sep)

Workshops area      120 → 96 seats      (backoffice, 19 Sep)

**Needs decision:** how to round a ticket cap of 115.2 seats

**Needs decision:** how many API credit redemptions the link accepts

Then: lint, 3 findings. Nothing changed.

## Fallback: Ingest a new source

Ingest: S06 Call with Talaverna Hotels

→ Page: meetings/S06-talaverna-call-note.md

→ Entities: +Talaverna Hotels, +Andreu Font, ~Garbí

→ FACTS.md proposals:

add Talaverna Palma: 60 Garbí sets, opening 2026-10-30

add Talaverna Hotels revenue 2025: EUR 1.9 million

**conflict lead time: S06 says 4 weeks, FACTS.md row 1 says  
6 weeks (S04, owner Head of Operations). No change.**

## Fallback: Lint finds a contradiction, a duplicate and a stale fact

Report: `outputs/lint-2026-09-21.md`

- 1. Contradiction (High):** lead time 6 weeks (row 1, S04)  
vs 4 weeks (S06 call note)
  - 2. Duplicate entity (Medium):** Color-Vall Coating  
vs Colorvall Coatings S.L. (SUP-0417)
  - 3. Stale fact (High):** Quality Manager Jaume Rius (S08),  
superseded by Irene Casado from 2026-06-01 (S09)
- Orphans 0, missing index entries 0, broken links 0.

# Fallback: The fact sheet shows the winning value and its source

projects/sotarena/wiki/FACTS.md

| # | Fact                   | Value               | Source     | Date              |  |
|---|------------------------|---------------------|------------|-------------------|--|
| 1 | Lead time              | 6 weeks             | S04        | 2026-08-03        |  |
| 9 | <b>Quality Manager</b> | <b>Irene Casado</b> | <b>S09</b> | <b>2026-05-28</b> |  |

History of superseded values

|   |                 |                                          |  |
|---|-----------------|------------------------------------------|--|
| 9 | Quality Manager | Jaume Rius (S08), valid until 2026-05-31 |  |
|---|-----------------|------------------------------------------|--|
