

Second Brain for Claude: LLM Wiki vs RAG

Date Monday, 21 September 2026

Time 11:00 to 12:00

Room Auditorium (100 seats)

Level Intermediate

HOST
Florian Steiner, Claude Community Ambassador Munich

Florian Steiner is a Claude Community Ambassador in Munich and helps agencies, consultancies and SMEs work productively with Claude.

Who this is for

Intermediate level. For people who already use Claude day to day and want a durable, reviewable knowledge base instead of one that resets every session: engineers, technical operators, and anyone maintaining docs, wikis or playbooks for an AI agent.

What you will leave with

- 1 Understand why AI agents forget your business: it is a findability problem, not a memory problem.
- 2 Compare the LLM wiki pattern against RAG, and see when each one fits, and why they complement each other.
- 3 Watch the pattern work live: ingest a new source, then lint catches a contradiction, a duplicate and a stale fact.

Timeline

START	DURATION	BLOCK	CONTENT
11:00	5 min	The map problem	Why your AI forgets your business: it has a map problem, not a memory problem.
11:05	10 min	RAG, the good part	What RAG does well, and where it loses context.
11:15	15 min	The LLM wiki pattern	Root map, canonical fact sheet, ingest, lint: the four moves that keep a wiki honest.
11:30	15 min	Live demo	On a fictional example company: ingest a new source, lint finds a contradiction, a duplicate and a stale fact.
11:45	5 min	When to use which	When to use which, and the starter repo to take home.
11:50	10 min	Q&A	Open floor.

What to bring

BRING
Nothing required. Optional: a laptop if you want to follow the live demo step by step.
